Preparation
Load sources and select targets
HuggingFace and Real-CATS, with optional BLTE.
Apply eligibility rules and select cohorts.
datasets.py, realcats.py
Fix the evaluation and graph scope
Keep groups together in development and test.
Prepare incident edges, closure edges, and layers.
prepare.py, splits.py
Fixed data and settings
Protocol, cohorts, folds, transfers, and checksums
Execution
Verify and build temporal graphs
Check the saved protocol, code, and data.
Apply seven orderings of equal-timestamp transfers.
execute.py, ordering.py, motifs.py
Count candidate subgraphs and build features
Validate local roles, then count at nine windows.
Build fingerprints and the conventional baseline.
motifs.py, features.py
Fit models and compare predictions
Select windows on development, then score test data.
Run statistical tests and ordering checks.
modeling.py, rq_binary.py, rq_multiclass.py, statistics.py
Saved results
Predictions, metrics, figures, tables, and verification records.
